About Us

Founded in 2013, Sooner Competitive Robotics is a student-led organization which serves as a hub for robotics competition teams at the University of Oklahoma. We focus on education through experience, professional networking, and excellence in engineering to help students of all backgrounds gain mastery in topics alongside their coursework.

We currently have teams building robots for two competitions:

- Mercury Remote Robot Challenge
- Intelligent Ground Vehicle Competition (IGVC)

Each team spends the academic year building and iterating their robot, and competes in the Spring or Summer.

Our mission is to win.

Why Sponsor?

Our students work in interdisciplinary teams to learn skills earlier and more thoroughly than they would in their degree programs alone, and they gain experience applying those skills to real projects. Some skills our students can expect to learn as early as their first year in SCR include:

- Integrating software with Robot Operating System (ROS)
- Designing PCBs and micro-controllers from scratch
- Modeling parts in Solidworks and 3D printing or machining them

Our organization has a legacy of innovation, and our members have a history of success at internships, full-time jobs, and research assistantships across the nation. Our alumni cite SCR as the most influential experience during their time at OU, and for many it is the best preparation for their interviews and eventual careers. This is because we support our students with professional opportunities alongside the development of important technical skills.

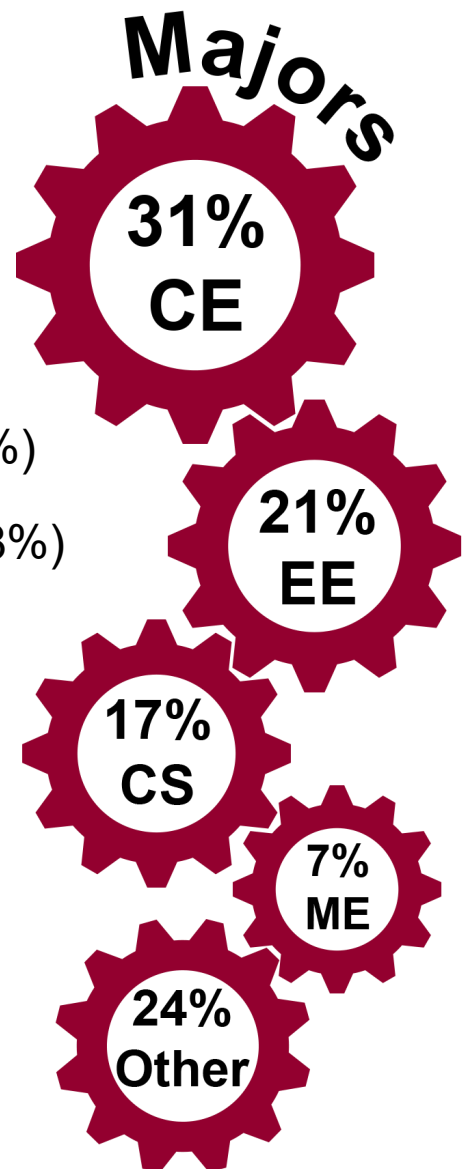

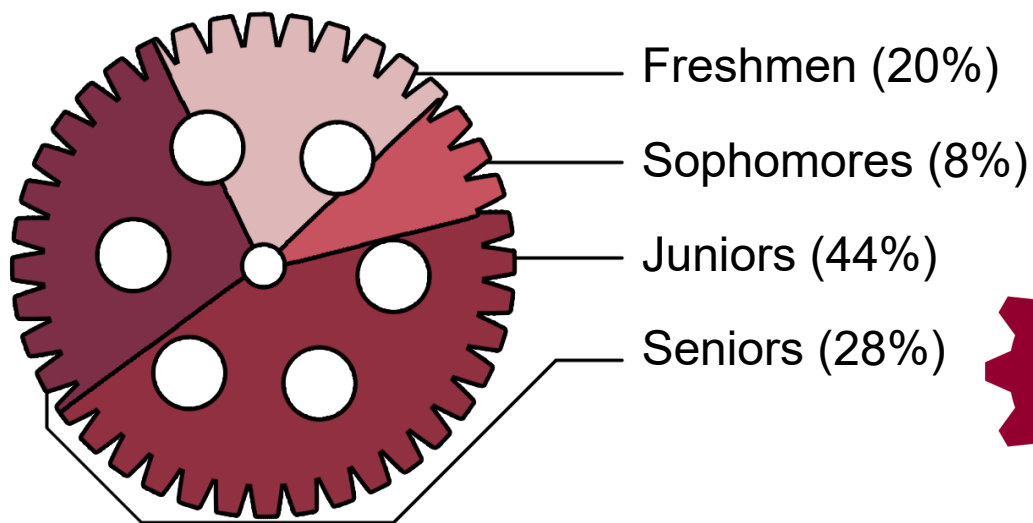

Your contribution will allow us to use better tools and components, bring in more members, build better robots, and go to our competitions. Our organization has an impact on people, and each of our sponsors contributes to that impact.

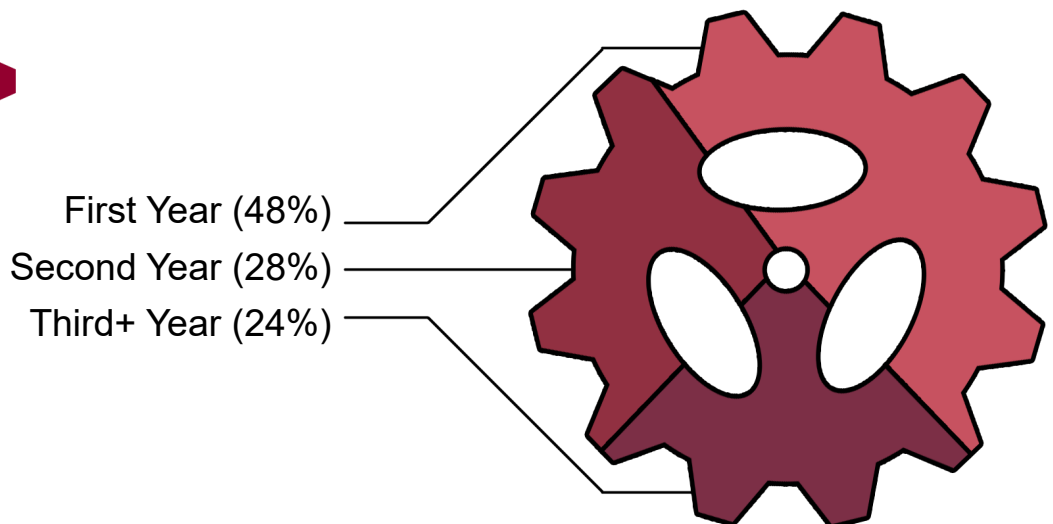

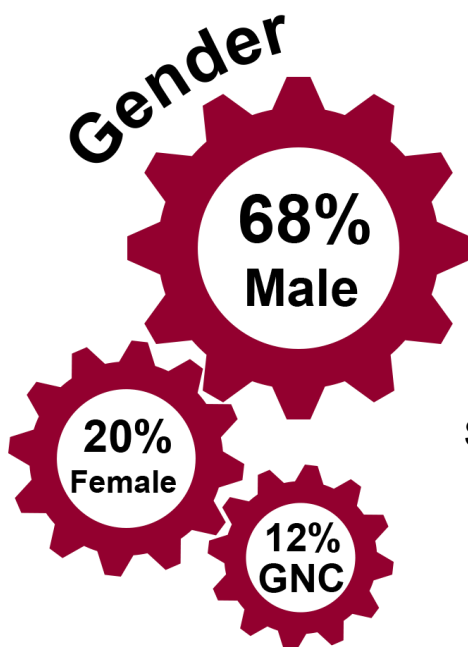

3 By The Numbers

Serving 30+ students
in 9 different majors

Attended
